

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method for conducting a search for stored information, comprising the steps of:
 - presenting a user interface to a user;
 - receiving an identification of a particular search language in which to search from the user;
 - receiving a search query; and
 - conducting a search of a database that contains information written in the identified language.
2. (Original) The method of claim 1, wherein the user interface comprises a search site accessible via a network.
3. (Original) The method of claim 2, wherein the search site comprises a web site accessible via the Internet.
4. (Original) The method of claim 1, wherein the search language is selected from a group of several different available languages which each pertain to a different language database.
5. (Original) The method of claim 1, further comprising the step of receiving selection of a different search language in which to search.
6. (Original) The method of claim 5, further comprising the step of reconfiguring the user interface so it is presented in the different search language.
7. (Original) The method of claim 5, further comprising the step of translating the search query into the different language.
8. (Original) The method of claim 7, further comprising the step of conducting a search for the translated search query in a database containing information written in the different language.

9. (Original) The method of claim 1, further comprising translating results located during the search into a language selected by the user.

10. (Currently Amended) A universal search engine, comprising:
means for interfacing with a user; and
means for searching one of several different available language databases in one of several different available search languages identified by the user.

11. (Original) The search engine of claim 10, wherein the means for interfacing with a user comprises a web site accessible via the Internet.

12. (Original) The search engine of claim 10, further comprising means for receiving selection of a different search language.

13. (Original) The search engine of claim 10, further comprising means for reconfiguring the means for interfacing with a user when a different search language is selected.

14. (Original) The search engine of claim 10, further comprising means for translating a search query into a different language.

15. (Original) The search engine of claim 14, further comprising means for searching for the translated search query in a database containing information in the different language.

16. (Currently Amended) Search engine software stored on a computer readable medium, comprising:

logic configured to present a user interface to a user;

logic configured to receive an identification of a particular search language from the user;

logic configured to receive a search query with the user interface; and

logic configured to search a database that contains information in the identified language.

17. (Original) The software of claim 16, further comprising logic configured to receive selection of a different search language.

18. (Original) The software of claim 17, further comprising logic configured to reconfigure the user interface so as to be written in the different search language.

19. (Original) The software of claim 17, further comprising logic configured to translate the search query into the different language.

20. (Original) The software of claim 19, further comprising logic configured to search for the translated search query in a database containing information in the different language.
